

## Property management from plans, bim models and maps

- **Integration of building data** from plans (dwg or BIM models).
- **Continuous navigation from maps** to building interiors.
- **Universal search of equipment** or site services from maps and plans.
- **Automatic peering of GIS/plan** equipment and CMMS equipment.
- **Triggering of management actions from maps or plans:** maintenance rounds, diagnostic rounds, etc.
- **Geopositioning of equipment & site services** on maps or plans.
- **Graphical data analyses by theme** (occupied premises, use of facilities...) for better maintenance decisions.
